Environment

Initiatives on the Environment

In April 2017, we formulated MOL Group Environmental Vision 2030 to present our cutting-edge initiatives for environmental preservation.

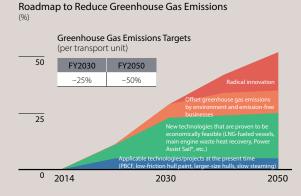

MOL Group Environmental Vision 2030

Shipping companies are responsible for undertaking the marine transportation vital to the infrastructure underpinning people's daily lives worldwide.

Meanwhile, the effectuation of the Paris Agreement on climate control has unified efforts by the international community to mitigate global warming. With this in mind, the MOL Group believes that it has a social obligation to take innovative steps to help solve environmental issues such as greenhouse

gas emissions, air pollution and biodiversity impediments. The MOL Group will grasp the environmental needs of customers and other stakeholders and provide solutions, in tandem with developing its environment and emission-free businesses into future core operations, with the aim of contributing to global environmental preservation.

The MOL Group targets reduction of greenhouse gas emissions per unit load by 25% by 2030 and by 50% by 2050 com-

* Power Assist Sail: Sailing rigs that provide supplementary propulsion force for the vessel by using the lift force of crosswinds, similar to the wings of an airplane, and drag from tailwind

Key Environmental Issues

In March 2014, we identified the highest-priority environmental issues and set about addressing those issues in a proactive manner. To identify these priorities, we analyzed issues from international conditions regarding environmental issues; the opinions of stakeholders including customers, investors, and so on; and our own internal viewpoints. Finally, we formulated the following eight action plans.

- . Promote use and innovation of technologies for reducing environmental impact and advanced support technologies for safer vessel operation through the "ISHIN NEXT— MOL SMART SHIP PROJECT—."
- Participate in projects to build vessels that run on alternative fuels such as LNG and supply alternative fuels.
- . Reduce greenhouse gas emissions by using ICT to optimize sailing even further.
- 4. Utilize renewable energy such as wind and solar power for vessel propulsion and at Group-related facilities in Japan and overseas.
- . Create environment and emission-free businesses.
- . Investigate emissions trading as a way to achieve greenhouse gas reduction targets
- Respond appropriately and proactively to air pollution prevention and the Ballast Water Management
- Promote modal shift in transportation by enhancing the ferry and coastal shipping business in Japan.

Environmental Investments (Billions of yen)				
	Fiscal 2015	Fiscal 2016	Fiscal 2017	
Environment-related R&D activities	0.3	0.4	0.5	
Utilization and expansion of existing environmental technologies	0.9	0.5	0.8	
Responses to environmental regulations	2.2	3.1	3.1	
Initiatives to save bunker fuel	1.0	1.1	0.8	
Initiatives of Group companies	0.3	0.3	0.5	
Total	4.6	5.4	5.7	

Organizational Structure for Environmental Initiatives

Organizational reforms implemented on April 1, 2018 created a framework where the New & Clean Energy Business Division will take the lead in promoting new and clean energy business going forward. The division will conduct feasibility studies and actively promote the environment and emission-free businesses that should become a core business for MOL in the future. In addition, the division will also set the Company's environmental targets and review the status of achievement of these targets in order to steadily advance initiatives.

Moreover, ahead of stricter regulation on sulfur content in fuel oil scheduled for 2020, the SOx 2020 Regulation Compliance Committee established in November 2016 will collect information and work in collaboration with sales divisions to promote Company-wide initiatives taking into account customers' needs.

Environmental Regulations

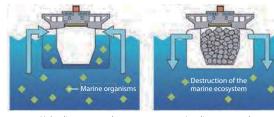

Schedule of Environmental Regulations by IMO, etc.

Ballast Water Management Convention

A convention to prevent cross-border transfer of foreign marine organisms through vessel ballast water was adopted by the IMO in 2004 and has been in effect since September 2017. Under the convention, vessels, including existing vessels, are mandated to install ballast water treatment systems, by September 2024.

Ballast voyage departure port Destination port

Unloading cargo and

Loading cargo and discharging ballast water

MOL's Initiatives

- In fiscal 2014, MOL set a Company-wide policy to install ballast water management systems on our vessels before the conven-
- We have already completed installation on more than 114 owned vessels (as of April 2018).

SOx Regulation

,					
2016	2017	2018	2019	2020	2021
	Sulfur lin	nit: 3.5%		Sulfur lir	nit: 0.5%

Regulate the sulfur content in fuel oil to control SOx volume in exhaust emissions. The sulfur limit will be tightened from 3.5% or less to 0.5% or less from 2020. Shipowners/operators have to choose a method from the following menu:

Method	Advantages	Disadvantages/Issues
Complied oil	No initial costs	High fuel costSupply availability in question
SOx scrubber	Lower fuel costs	High initial cost Large space required
Alternative fuel (LNG, etc.)	Effective for other environmental regulations	High equipment cost Insufficient supply system Difficult modifications

MOI's Initiatives

- MOL has been studying complied oil and SOx scrubbers as both are subject to future fuel prices.
- MOL teamed up with BHP Billion, Rio Tinto, etc., on a joint research project for an LNG-fueled capesize bulker.
- MOL took delivery of three methanol tankers equipped with dual-fuel, low-speed diesel engines that can run on methanol
- In 2019, MOL will take delivery of a tugboat with a dual-fuel (bunker A/LNG) engine.
